

DESCRIPTION

M63813P/FP/GP/KP are seven-circuit Single transistor arrays with clamping diodes. The circuits are made of NPN transistors. Both the semiconductor integrated circuits perform high-current driving with extremely low input-current supply.

FEATURES

- Four package configurations (P, FP, GP and KP)
- Medium breakdown voltage ($BV_{CEO} \geq 35V$)
- Synchronizing current ($I_{C(max)} = 300mA$)
- With clamping diodes
- Low output saturation voltage
- Wide operating temperature range ($T_a = -40$ to $+85^\circ C$)

APPLICATION

Driving of digit drives of indication elements (LEDs and lamps) with small signals

FUNCTION

The M63813P/FP/GP/KP each have seven circuits consisting of NPN transistor. A spike-killer clamping diode is provided between each output pin (collector) and COM pin (pin9). The transistor emitters are all connected to the GND pin (pin 8). The transistors allow synchronous flow of 300mA collector current. A maximum of 35V voltage can be applied between the collector and emitter.

PIN CONFIGURATION

The seven circuits share the COM and GND.

The diode, indicated with the dotted line, is parasitic, and cannot be used.
